

## SCOTTISH HYDROGEN INDUSTRY PARTNERS WITH CLEAN ENERGY BUSINESS COUNCIL IN DUBAI

### **Scottish Hydrogen Day in Dubai, Wednesday 23rd March 2022:**

PlusZero Managing Director David Amos signs a Memorandum of Understanding with the Clean Energy Business Council (CEBC), Middle East and North Africa on behalf of the Scottish Hydrogen and Fuel Cell Association (SHFCA), in a major boost for Scotland's growing green hydrogen economy.

The MoU develops and strengthens links in order to support the development of clean energy in both locations and around the world. It was signed today at the Scotland Hydrogen Day as part of Expo 2020 in Dubai.

PlusZero was launched in 2021 by founder David Amos with a mission to bring carbon free power wherever it is needed. PlusZero went on to successfully deliver a series of clean power events at Edinburgh's International Festival and at COP26, as well as its first commercial shipment of Scottish green hydrogen for Extreme E's Jurassic X-Prix in Dorset.

Plus Zero's green hydrogen from the Western Isles is produced from renewable electricity which splits water into green hydrogen and oxygen. The Scottish Government has ambitions for Scotland to be at the forefront of the European hydrogen sector and PlusZero aims to play a leading role in making that happen.

Scottish Government Minister for Business, Trade, Tourism and Enterprise, Ivan McKee MSP, was also present at the signing.

**Founder and Managing Director of PlusZero, David Amos, said:**

“I am delighted to have signed this agreement on behalf of the Scottish Hydrogen and Fuel Cell Association, which plays such an important role in supporting its members to achieve their hydrogen ambitions.

“Scotland has been gifted with the renewable energy assets that will enable it to become a global leader in using green hydrogen to support the clean energy revolution, just as it had the natural gifts to lead the oil and gas revolution in decades past.

“Our presence this week at the Dubai Expo 2020, and the backing from both the Scottish and UK governments, will help to put us firmly on the global hydrogen map.”

## **ABOUT PLUSZERO**

PlusZero is transforming the clean energy sector – the driver for new economic growth worldwide. Its Green Hydrogen from the Western Isles provides a carbon-zero, pollution-free source of fuel for the 21st century.

PlusZero uses surplus electricity produced by local renewable wind power to split water into hydrogen and oxygen using a process called electrolysis. This captures renewable energy that would otherwise be lost (as the sun doesn't always shine or wind always blow). PlusZero therefore unlocks the full promise of renewable energy.

PlusZero then uses this Green Hydrogen to fuel hydrogen combustion engines, giving customers clean power wherever they need it. PlusZero has been powering outdoor events since early 2021, and is increasing its hydrogen generator range to meet the varied demand for clean portable power in the events, outdoor filming, construction and industrial sectors.

The company's expert team and extensive networks of hydrogen & engineering specialists give it unparalleled insight into fast-evolving hydrogen technologies. Collaboration is central to PlusZero's strategic approach. It works together with public sector, community, and business partners in the Western Isles, the UK, and beyond to secure direct community and environmental benefits – above all, clean energy.

**PlusZero - a community-based solution with a global footprint.**
